

SSASS Session One

Introductions

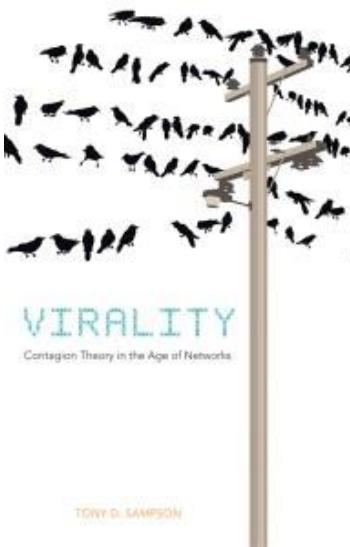

Introductions

Dr Tony D Sampson

Dr Mikey B Georgeson

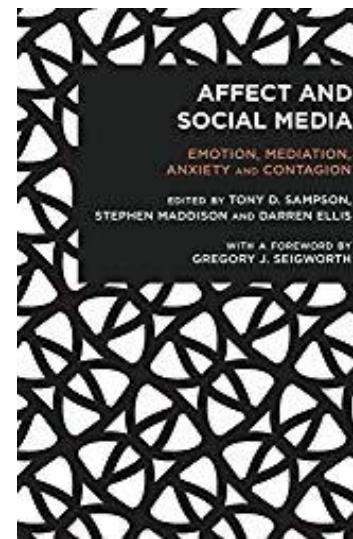

Tony D Sampson

[born 1965] is a British critical theorist with an interest in philosophies of media technology, design thinking, social and immersive user experiences and neurocultures

Sense Making in
Neuroculture

Tony D. Sampson

Mikey B Georgeson

Mikey Georgeson (born 1967) is an artist and musician, working in an assemblage of media, making up what he defines as aesthetic machines. Audiences of his band David Devant and his Spirit Wife will be familiar with the aesthetic machine's atmosphere of proliferating creativity. He explains that the idea of these modular spaces of felt understanding is partly a response to the increased propensity to place art in representational frameworks. He explains, "Due to a life with hearing loss, my relationship to meaning is often not what I hear but what I feel. My hearing loss creates a tapestry of linguistic flows as I fill in the gaps and reinvent phrases through the shifting repetition of day-dreaming."

He has a Doctorate in Fine Art from UEL where he also lectures in Contextual Studies. In 2016 he took part in a Festival of Georgian culture at the Shakespeare Theatre Gdansk, using song and performance to explore boundaries and national identity. His painting "Dopamine molecule of intuition" was exhibited at the John Moore's painting prize. In 2016 he created a song-film with Turkish and UK artists for the Istanbul Design Biennale "Are we Human?" His film the Deadends was shown as part of the ICA's 100 years of Dada and The Nonbifurcatedman at the Athen's Festival of Digital Art. His installation Actual Occasion is part of the 2019 Dogon Egg transpersonal community entanglement project at the Amp Gallery Peckham.

Schedule

US Schedule 3x 2hour sessions

Session One: *Aesthetic Fact*

Kimey - *Aesthetic Fact* (10mins)

10mins - *Introductions*

Tony – Beyond the Cognitive Paradigm (Intro lecture 1hour max with Q&A (attached). Sets out some approaches to affect studies future...)

Mikey – 40mins workshop - Song Writing from Matter Flow Morning Drawings

Session Two: *Lures of Experience*

Mikey – Actual Occasion and the Rope Goggles of Entanglement – (10mins)

Tony – *Aesthetic Fact* lecture 30mins max with Q&A (attached)

Kimey – The Lure of Felt Experience (10mins)

Q&A with Tony and Kimey (10mins)

Mikey – 60mins workshop tbc – Mask making and song writing development

Session Three: *The Collective Nonconscious*

Kimey – The Collective Nonconscious (15mins)

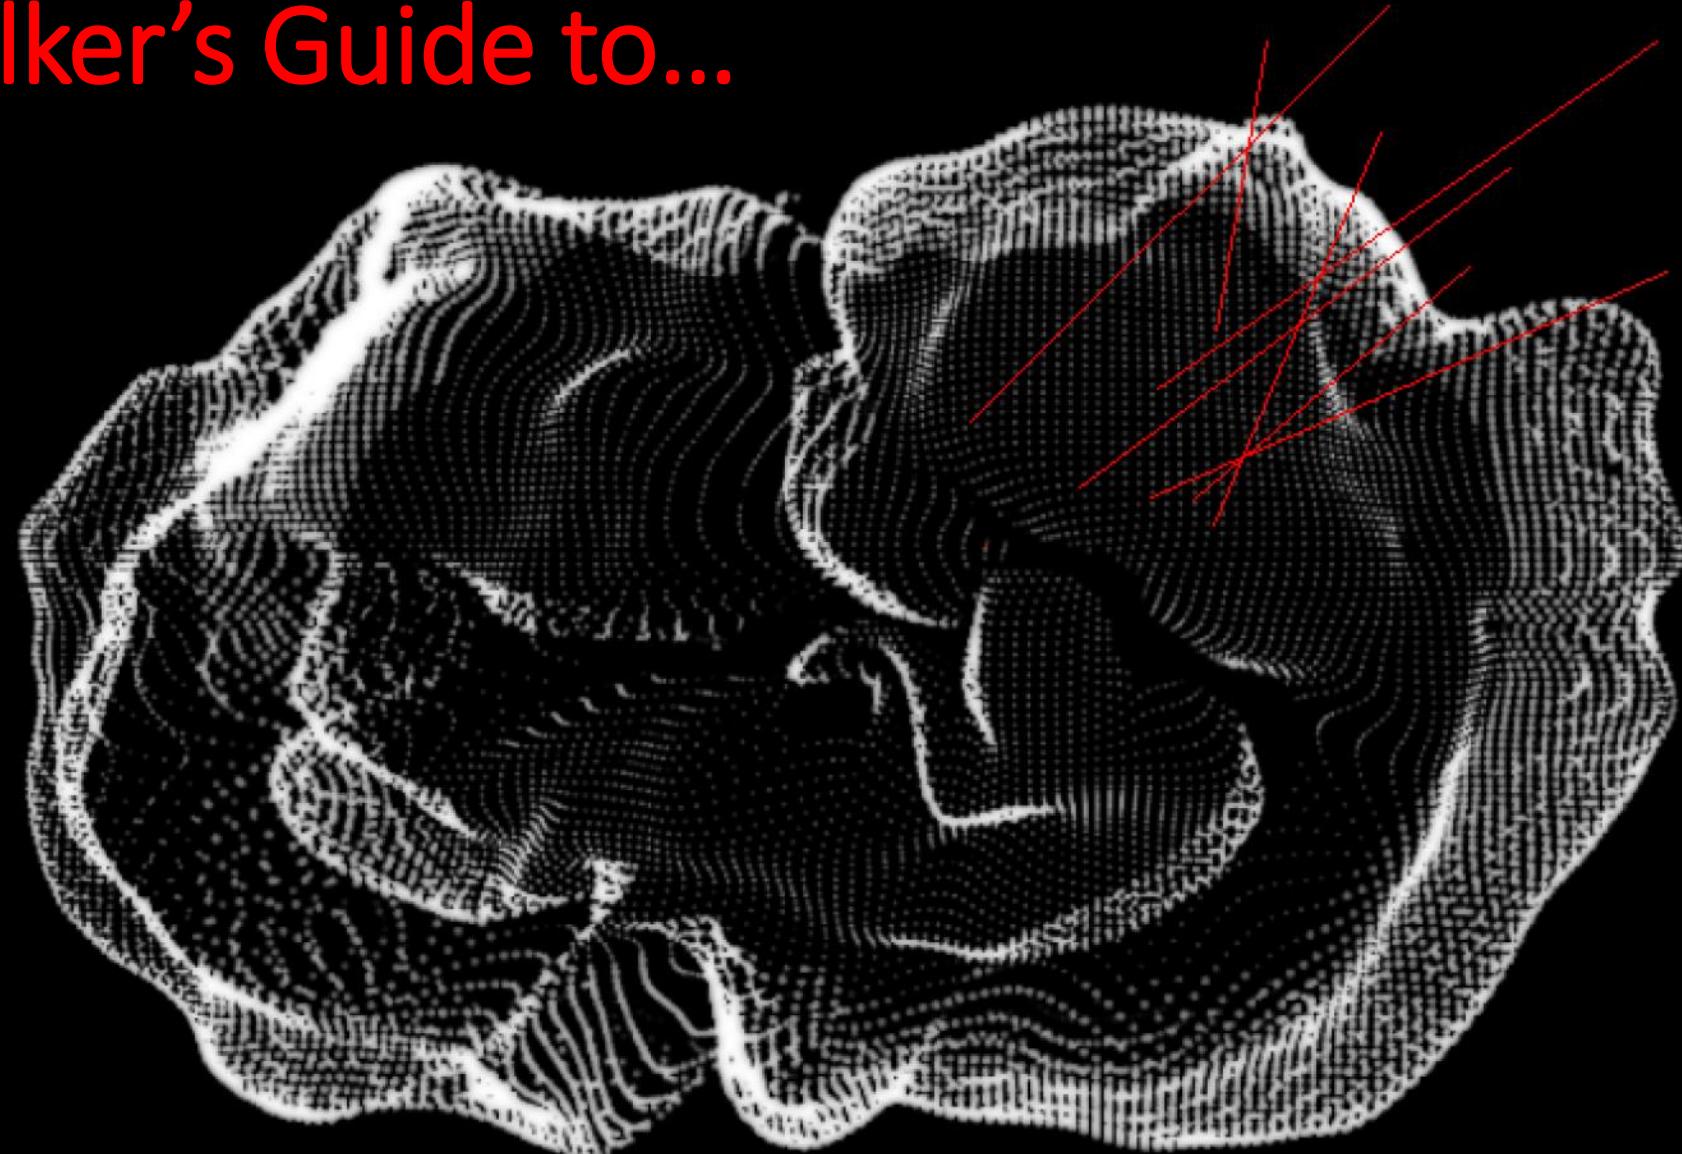

Tony to lead on Sleepwalker lecture - and key (pre)concepts discussion with group (slides on Sleepwalker and each keyword - tbc) – 1hour

Group led discussion on how these concepts might feed into affect studies – 30mins

Masked performance of the group song - to end 45mins

Experience (Capitalism)

Aesthetic Ontology

The Sleepwalker

A new conceptual persona – Tardean, Whiteheadian

Command Posts and Footholds

[wiki How to Rock Climb Overhangs on a Rock Wall](#)

Command Posts and Footholds

We sleep; we are half-awake; we are aware of our perceptions, but are devoid of generalities in thought; we are vividly absorbed within a small region of abstract thought while oblivious to the world around; we are attending to our emotions — some torrent of passion — to them and to nothing else; we are morbidly discursive in the width of our attention; and finally we sink back into temporary obliviousness, sleeping or stunned

(Whitehead P&R, p. 161).

The Brain is a [Cognitive] Computer?

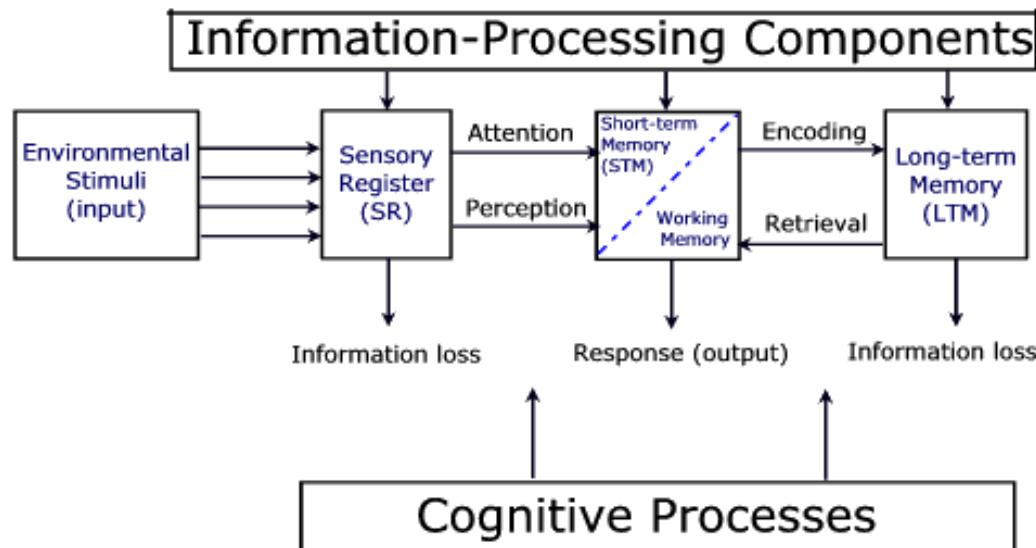

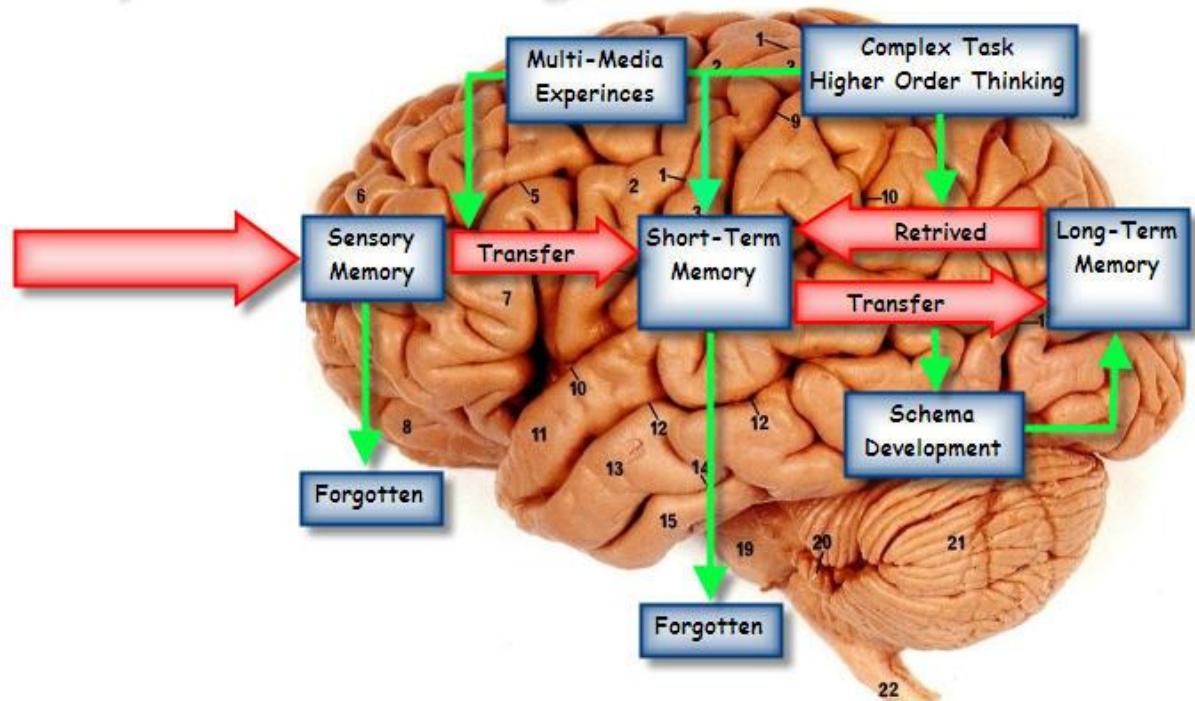

Figure 1.2 An Information Processing model

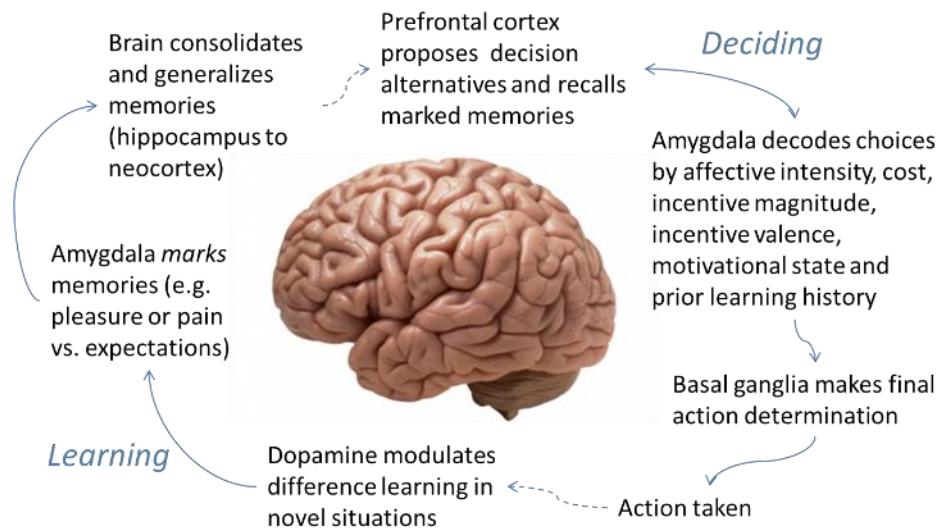

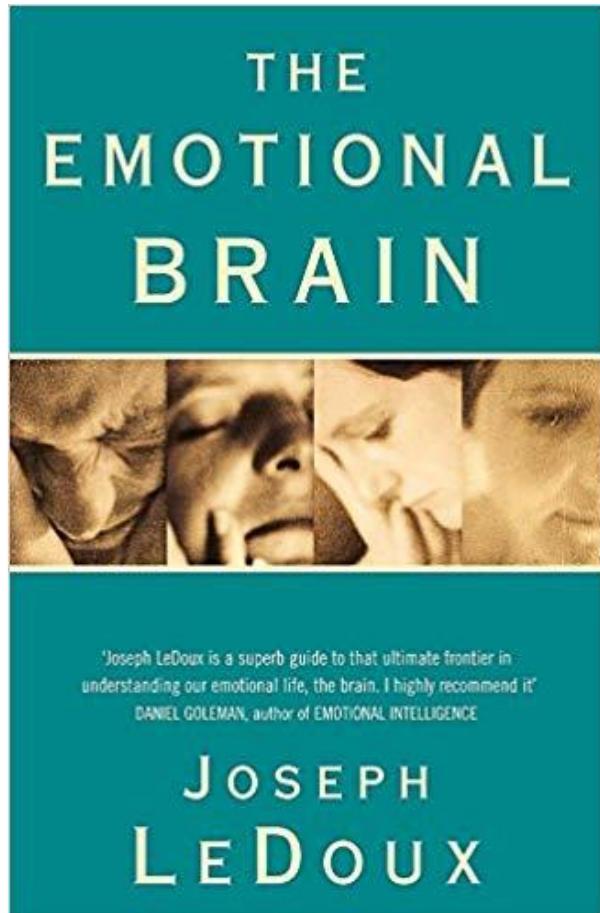

Information Processing Model

Emotions, feelings, affect?
Marginal, noisy, messy, irrational

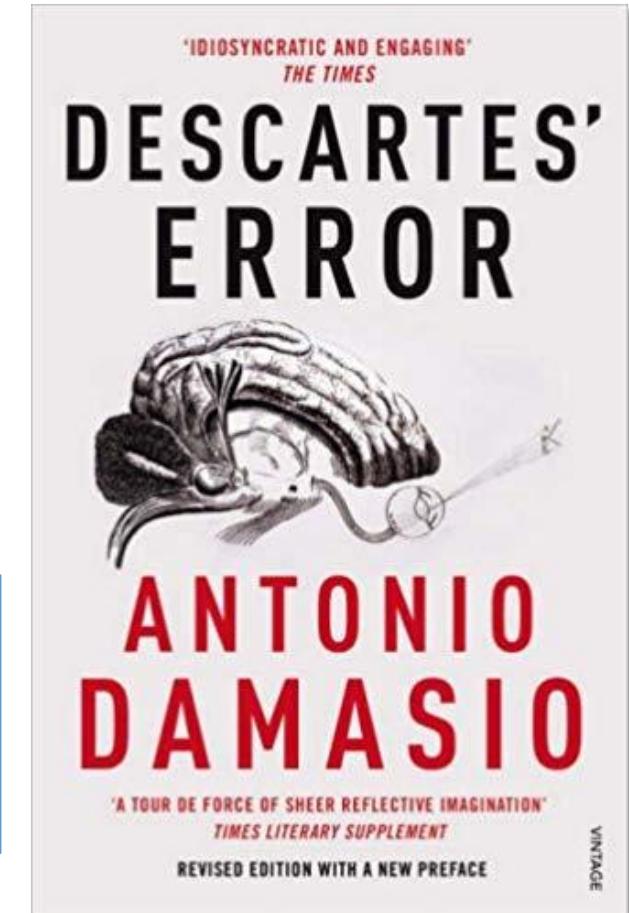

Emotional Turn in the Neurosciences

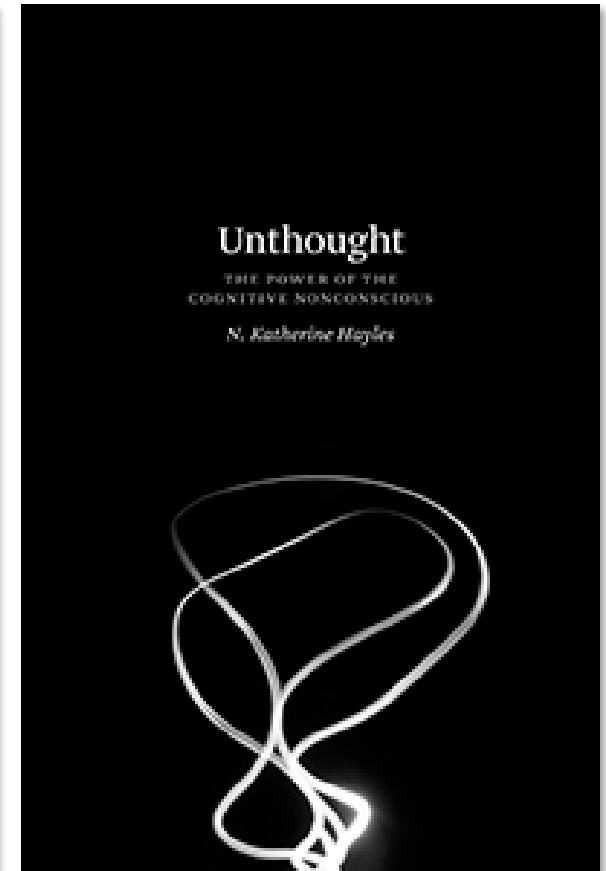

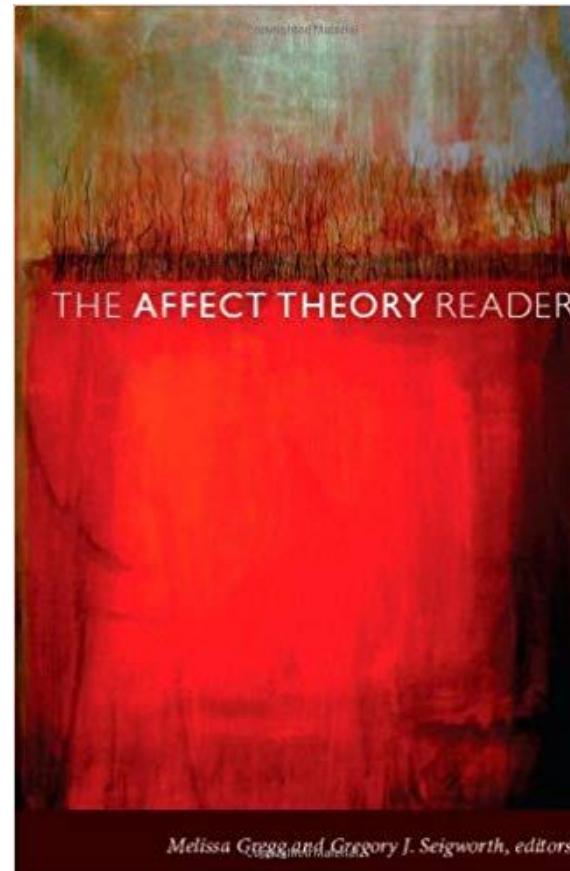

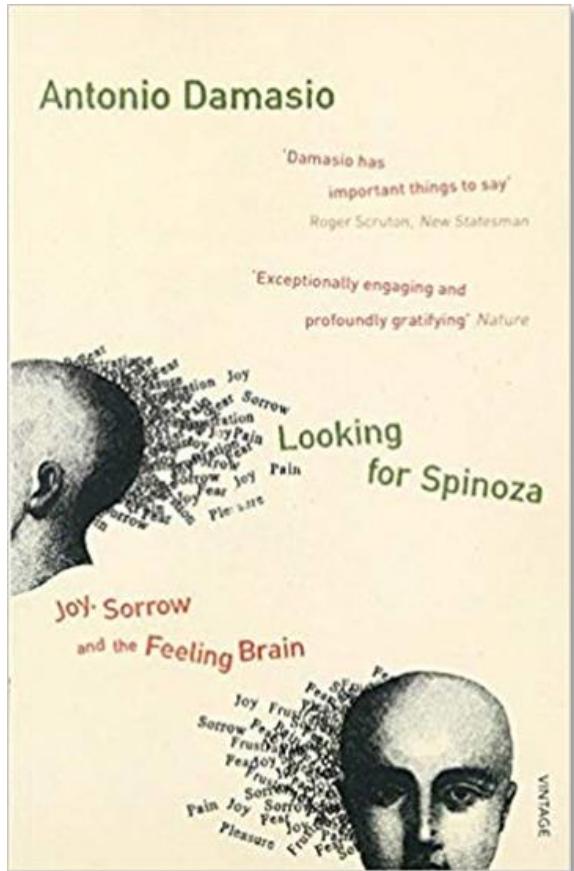

“.... emotions and feelings may not be intruders in the bastion of reason at all; they may be enmeshed in its networks.”

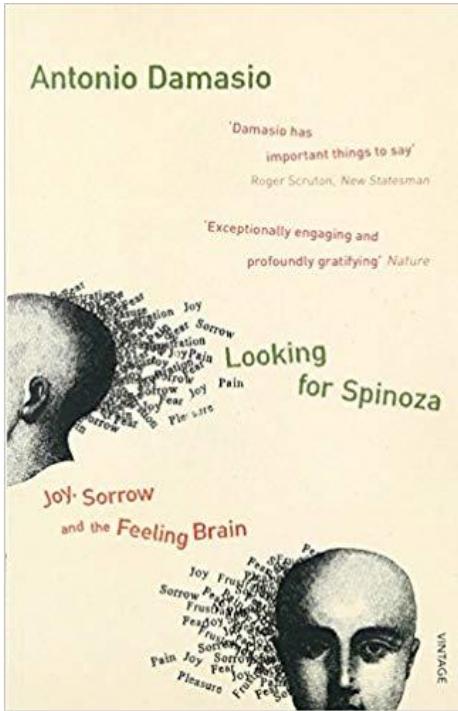

Damasio cited in Tony D. Sampson, “Contagion Theory Beyond the Microbe.” CTheory Journal, 2011

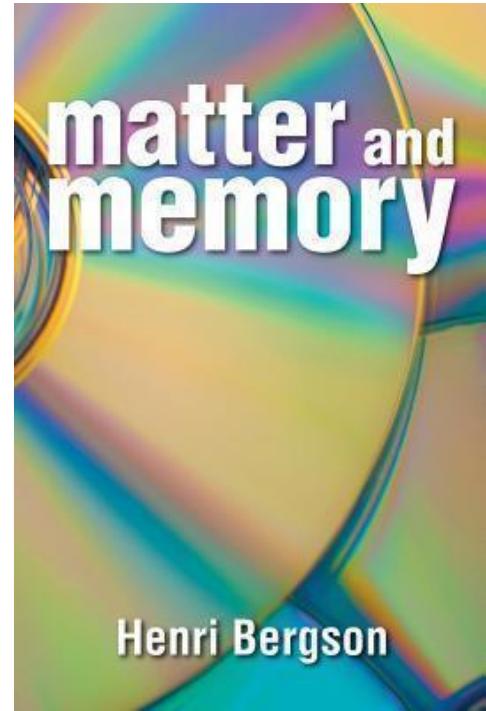

Much Theoretical Excitement

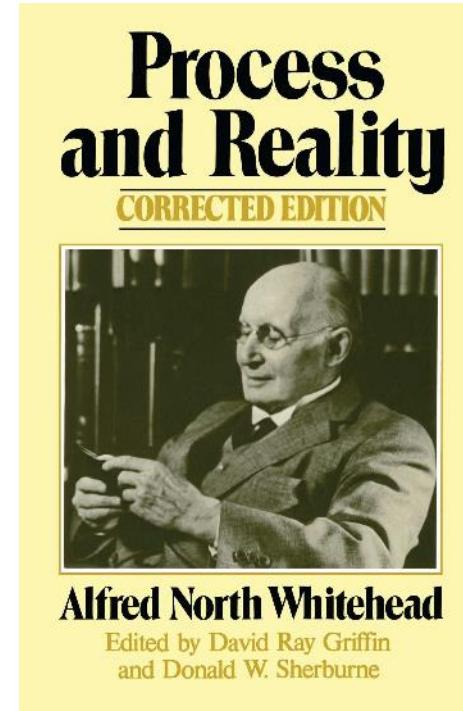

Much Philosophical Excitement!

Affect Theory
Spinoza/Descartes
“What Can a body
do? “Consciousness
always arrives late.”

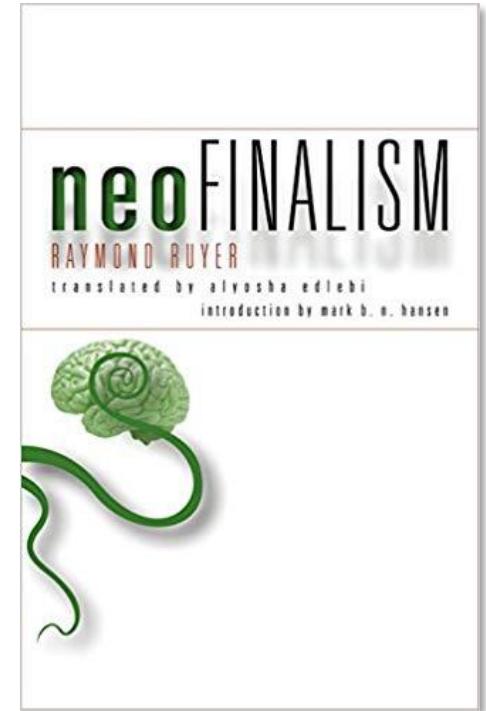

“*Impulsive decision
acts* given priority
over [cognitive]
hesitations.”
Brain is like a
delimiter”

Alfred North Whitehead

Edited by David Ray Griffin
and Donald W. Sherburne

“In Whitehead’s
aesthetic ontology
consciousness is not
a *command post*, but
a *foothold* in reality”

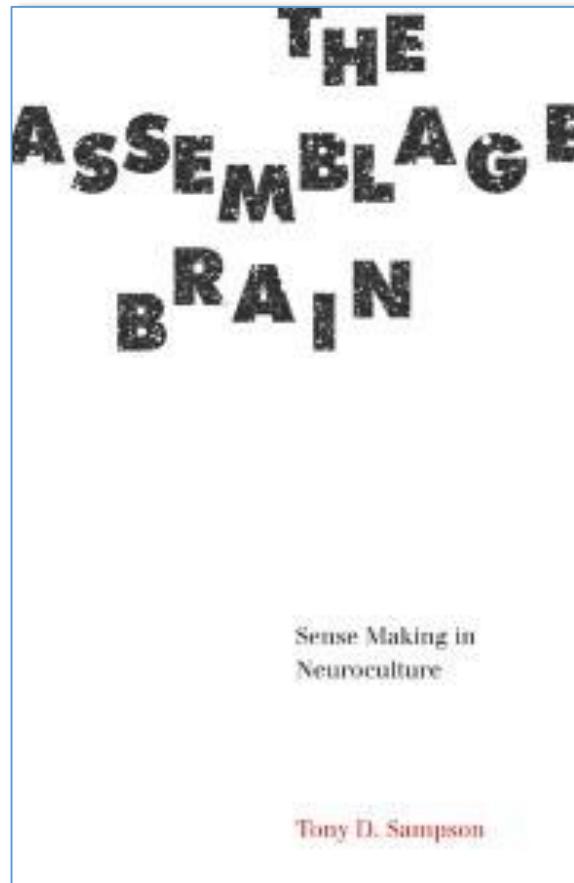

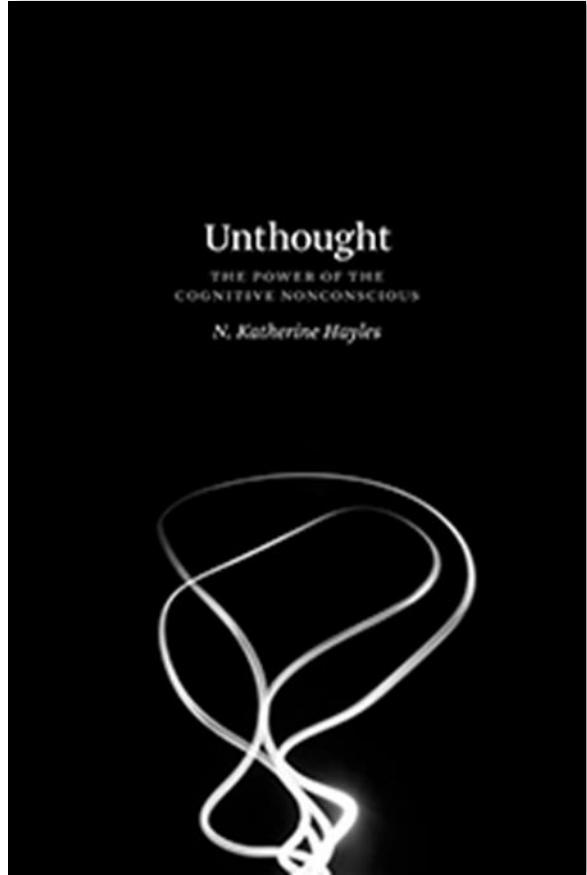

“Perceptual reality is
secondary to the
primacy of absolute
sensation.”

Nonconscious Debate

2018 | Capacious: Journal for Emerging Affect Inquiry 1 (2)

CAPACIOUS

Unthought Meets the Assemblage Brain

~~~~~  
N. Katherine Hayles and Tony D. Sampson

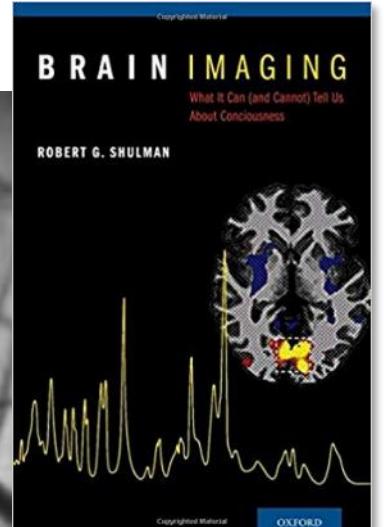

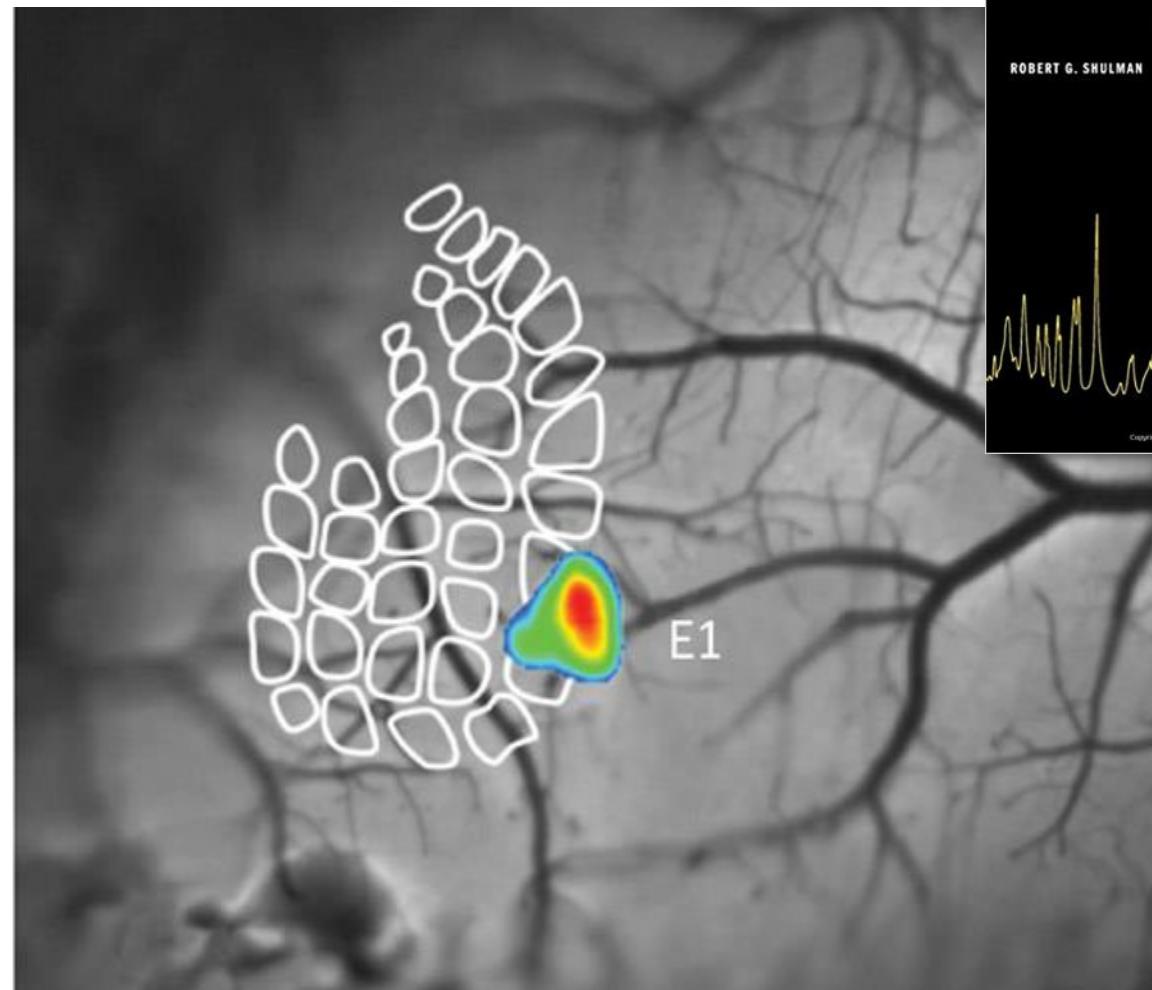

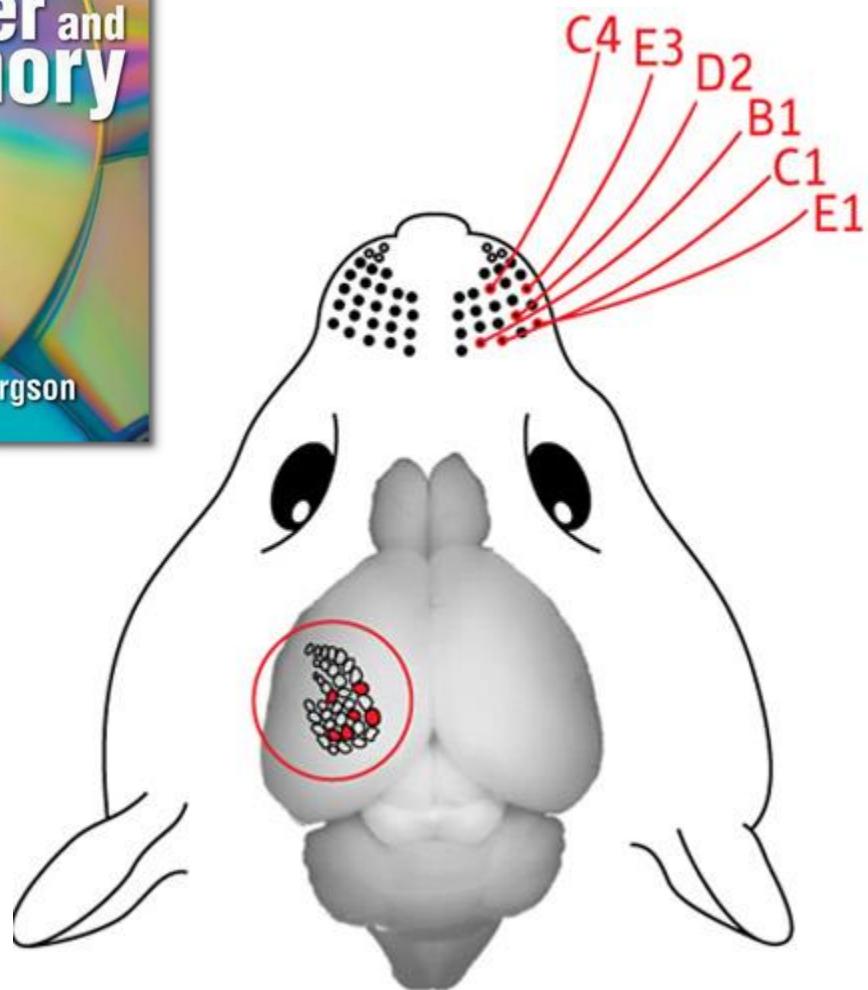

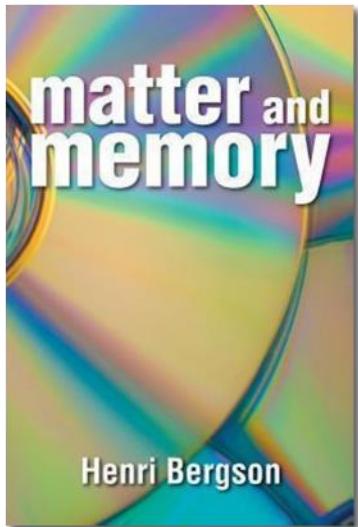

### A Dialogue Between N. Katherine Hayles and Tony D. Sampson

It has become such a refrain for affect studies—Spinoza's “what can a body do?”—that it is sometimes repeated half-absentmindedly: as if all questions involving the realm of consciousness have been largely settled, as if they are somehow located elsewhere, as if they are entirely different sets of questions than those asked of a body. But of course they're not. Perhaps that's one of the reasons why the place of “nonconscious” is so particularly intriguing to take up: troubling any too-ready line drawn around, through, or between body-mind-and-world. “Just *where/when* is the nonconscious?” is, at least initially, as pertinent as the “what-can-it-do?” question—as it comes out of the cognitive sciences to intersect with and complicate the affect studies' refrain.

And that's what makes this dialogue between N. Katherine Hayles and Tony Sampson so fascinating and theoretically rich. Following upon their most recent books—Hayles's *Unthought: The Power of the Cognitive Unconscious* (University of Chicago, 2017) and Sampson's *The Assemblage Brain: Sense Making in Neuroculture* (University of Minnesota, 2016), the convergences and divergences that emerge and weave throughout this conversation are quite revealing.

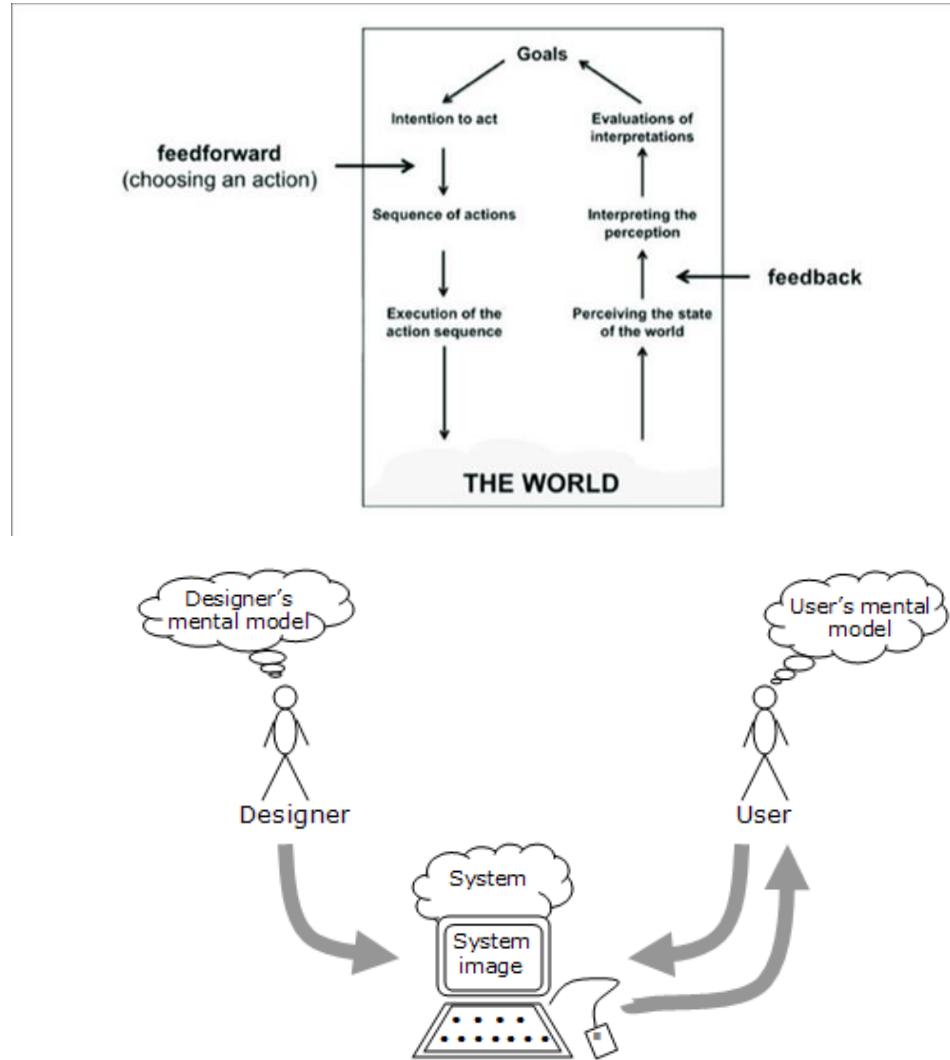

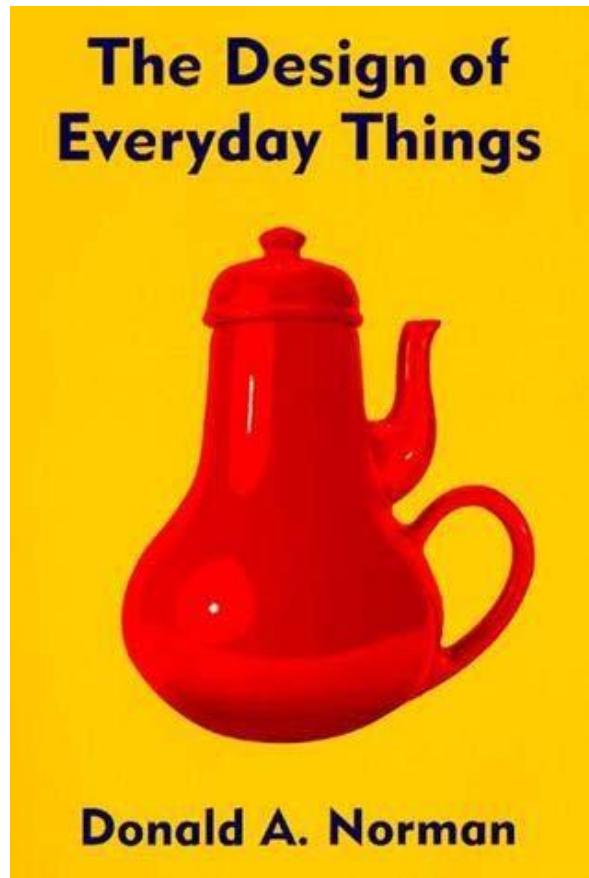

What transpires in the unmediated space-time excess that moves, at once, between and alongside cognition and recognition, between and alongside formation and information, between and alongside prehension and comprehension? Nietzsche

# Ersatz experiences

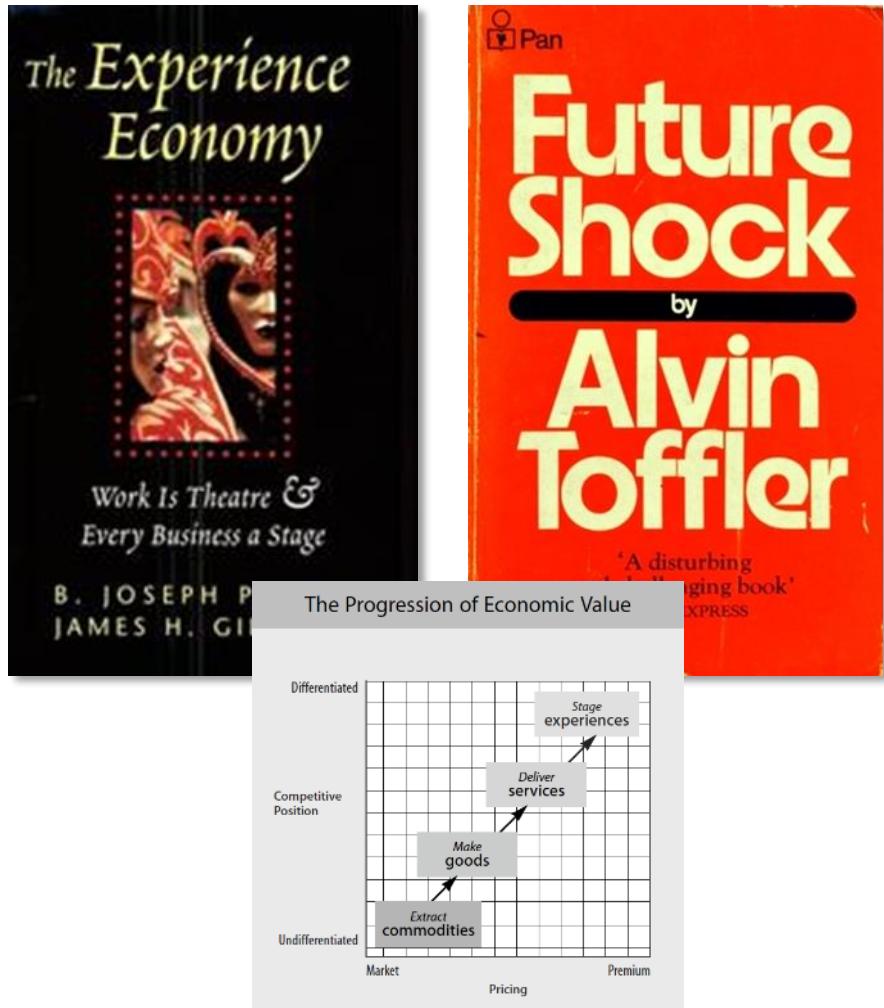

How the Brain Processes an Experience

# Neurocapitalism?

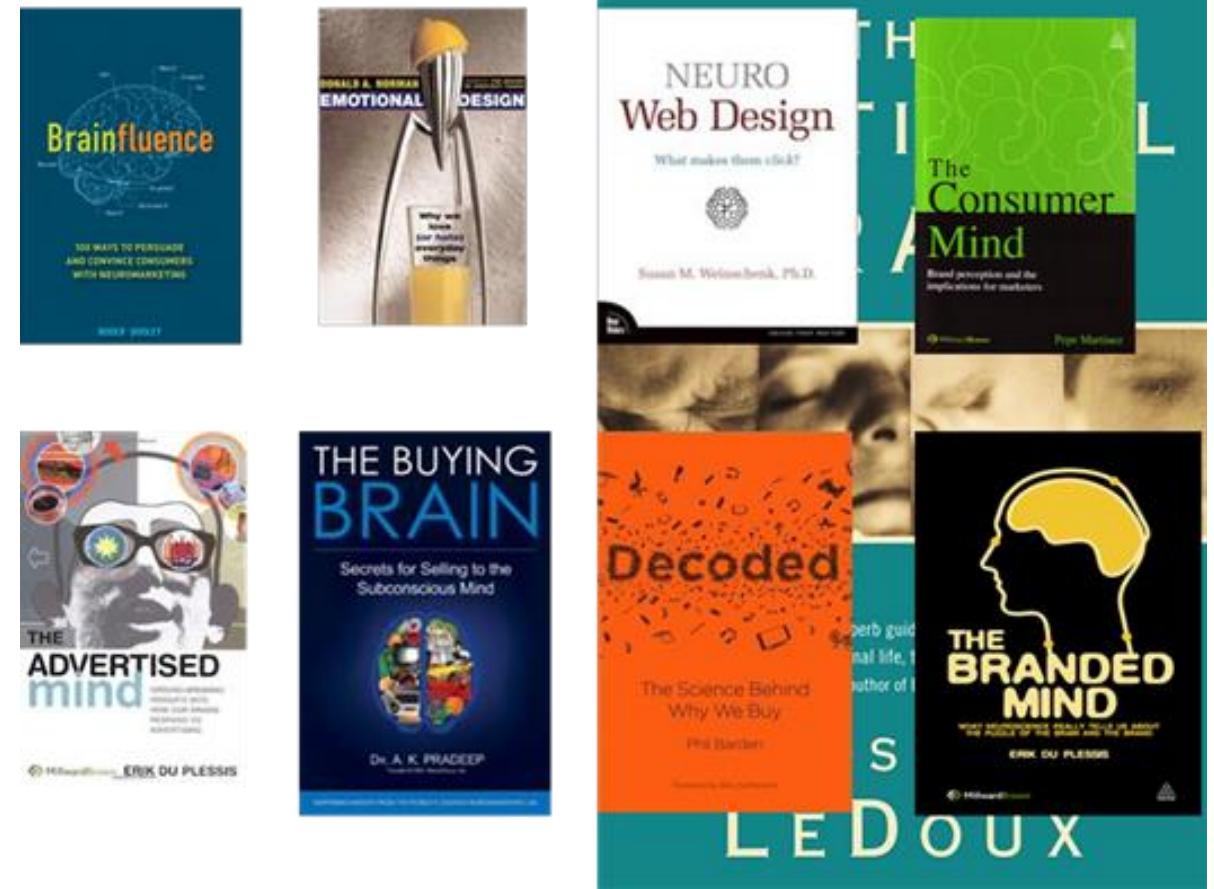

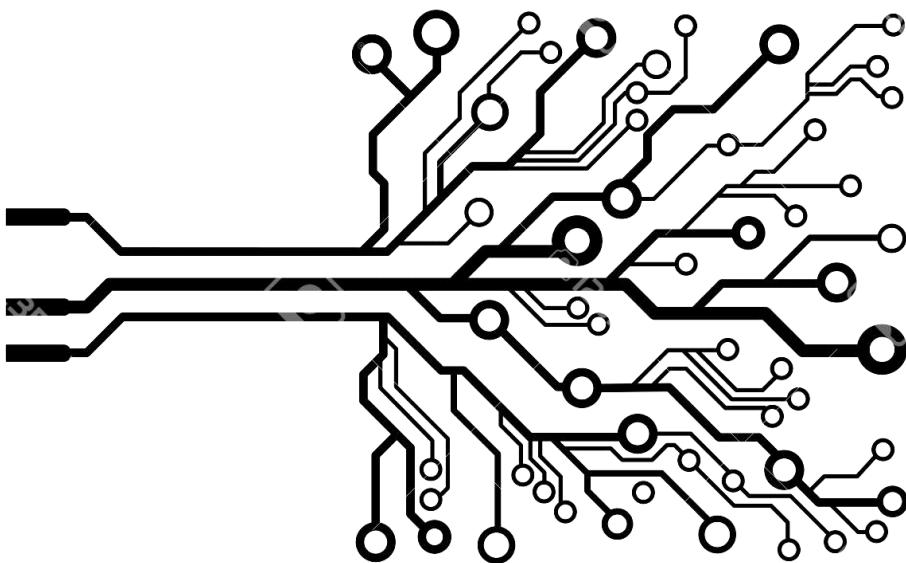

# Experience Industries

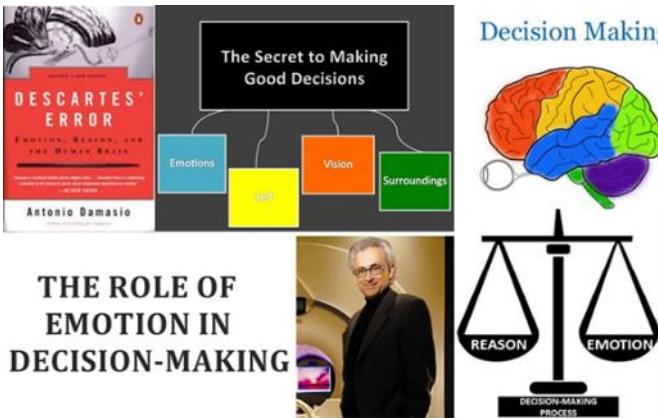

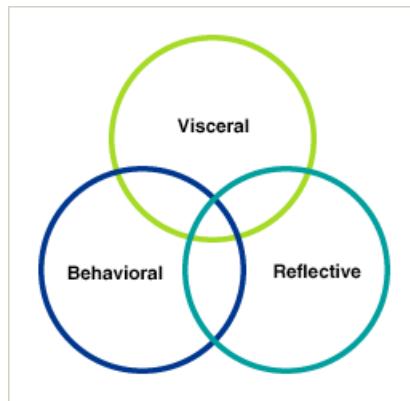

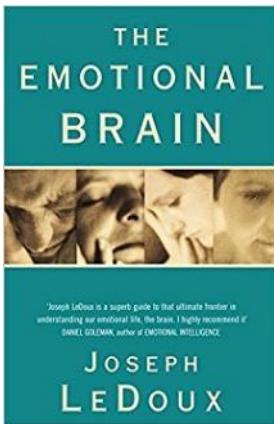

“[The experience industries are] a revolutionary expansion of certain industries whose sole output consists not of manufactured goods, nor even ordinary services, but pre-programmed ‘experiences’. The experience industry could turn out to be one of the pillars of super-industrialism, the very foundation, in fact, of the post-service economy... the experience industry of the future and the great psychological corporations, or psych-corps... will dominate (Toffler, 1970, 208-09).”

Holbrook and Hirschman (1982: 132-40) argue for “an experiential view” of consumption focused on the symbolic, hedonic (the pursuit of fantasies, feelings, and fun), and aesthetics of the consumption experience.

# Corporate Social Media and the University

**Facebook/Cornell Emotional Contagion Experiment**

**Published in the Proceedings of the National Academy of Sciences (PNAS)**

It is “a matter of concern that the collection of the data by Facebook may have involved practices that were not fully consistent with the principles of obtaining informed consent and allowing participants to opt out.”

But...

“As a private company Facebook was under no obligation to conform” to these principles

“PNAS editors deemed it appropriate to publish the paper.”

# “Inside Britain’s Meme Factory”

**“Emotion is the fuel that fires virality.”**

**“People share feelings, not information.”**

**“There is a lot of science behind all this, you know, and how it connects to human nature and how humans connect with each other.”**

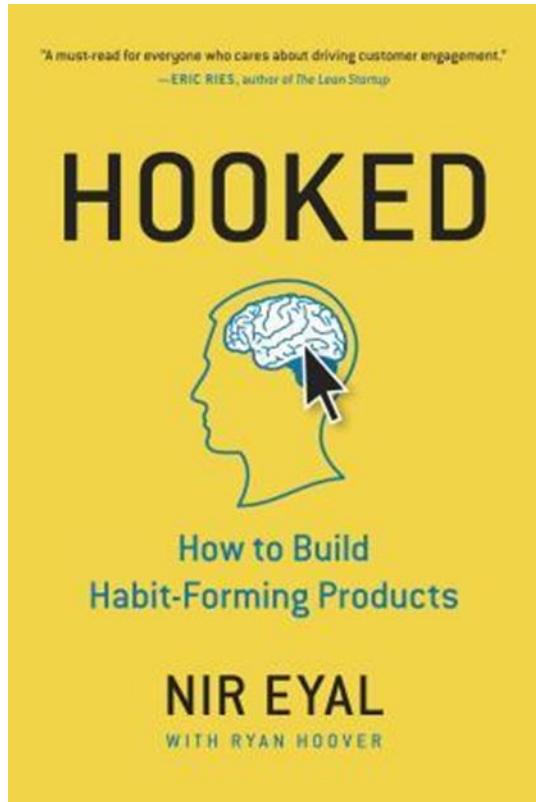

**“The stronger the emotion that a Facebook post, tweet or Instagram story elicits, the further it will be carried by the churning waves of [an] algorithm.”**

**“Low-arousal emotions such as contentment and relaxation are useless in the viral economy.”**

**“If you want to get anywhere in the social-media game, you’re going to need something stronger: frustration, anger, excitement, awe.”**

**“Currently, Social Chain’s services cost anywhere between £10,000 and £50,000 per month.”**

Technologies have turned into compulsions, addictions.

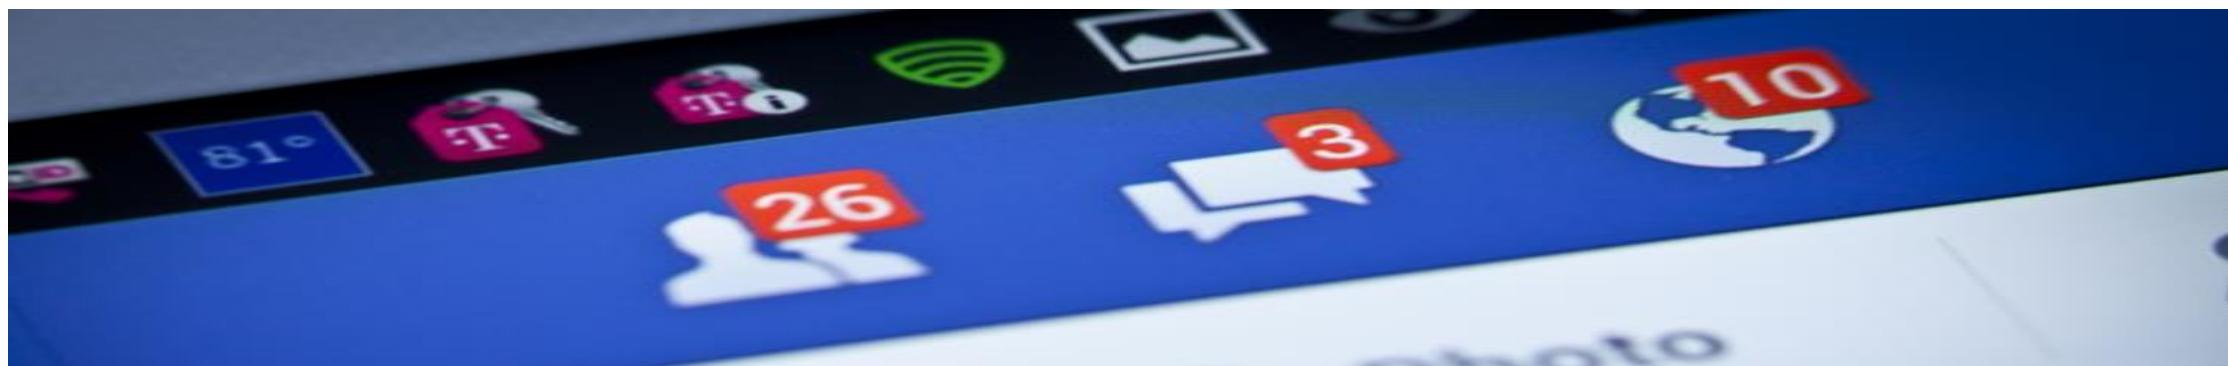

“It’s the impulse (pull) to check a message notification... for just a few minutes, only to find yourself still tapping and scrolling an hour later.”

Claims designed “experiences” can become habit forming...

## The Hook

# Aesthetic Fact and Fictioning Machines

A work of fiction appeals to an audience on an aesthetic register of experience

A different *measure* of fact.

A 'value' based on 'elements in feeling.'

*Intensity of experience.*

Feeling is not opposed to fact.

Not a personal or irrational experience.

A powerful, impersonal *lure* that draws an audience into the delightful experience of the fact.

This does not mean that we have to deny facts (e.g. climate change). However, Whitehead's aesthetic proposition generally refuses to be 'pushed to meticulous exactness.'<sup>1</sup>

On the Spectra of Aesthetic Experience  
From the *Sleepwalker's Guide to Social Media*  
Diagram by Mikey Georgeson

# The Lure of Felt Experience

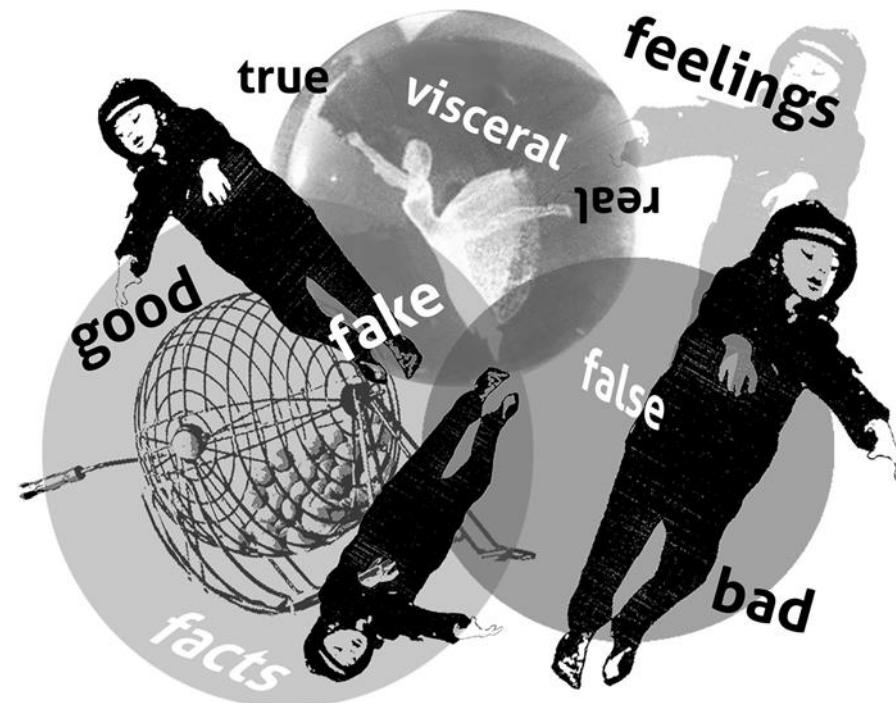

A lure is not an artifice designed to fool someone, or an illusion that masks reality... It simply is a matter of seeing propositions as involving *capture* and *grasping*.

Debaise, 2017: 81-82

# Command Posts and Footholds

‘We sleep; we are half-awake; we are aware of our perceptions, but are devoid of generalities in thought; we are vividly absorbed within a small region of abstract thought while oblivious to the world around; we are attending to our emotions — some torrent of passion — to them and to nothing else; we are morbidly discursive in the width of our attention; and finally we sink back into temporary obliviousness, sleeping or stunned’

(Whitehead P&R, p. 161).

## Unthought Meets the Assemblage Brain

~~~~~  
N. Katherine Hayles and Tony D. Sampson

A Dialogue Between N. Katherine Hayles and Tony D. Sampson

It has become such a refrain for affect studies—Spinoza's “what can a body do?”—that it is sometimes repeated half-absentmindedly: as if all questions involving the realm of consciousness have been largely settled, as if they are somehow located elsewhere, as if they are entirely different sets of questions than those asked of a body. But of course they're not. Perhaps that's one of the reasons why the place of “nonconscious” is so particularly intriguing to take up: troubling any too-ready line drawn around, through, or between body-mind-and-world. “Just *where/when* is the nonconscious?” is, at least initially, as pertinent as the “what-can-it-do?” question—as it comes out of the cognitive sciences to intersect with and complicate the affect studies' refrain.

And that's what makes this dialogue between N. Katherine Hayles and Tony Sampson so fascinating and theoretically rich. Following upon their most recent books—Hayles's *Unthought: The Power of the Cognitive Unconscious* (University of Chicago, 2017) and Sampson's *The Assemblage Brain: Sense Making in Neuroculture* (University of Minnesota, 2016), the convergences and divergences that emerge and weave throughout this conversation are quite revealing.

What transpires in the unmediated space-time excess that moves, at once, between and alongside cognition and recognition, between and alongside formation and information, between and alongside prehension and comprehension? Nietzsche

Hayles (2017) on the Unthought

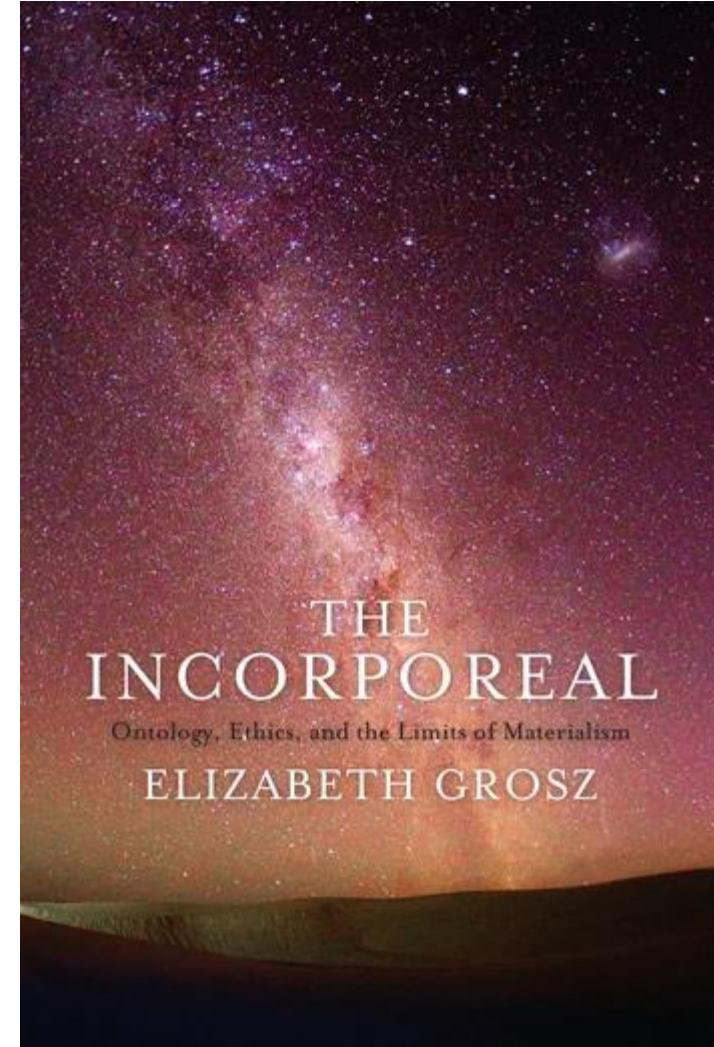

‘Conspicuously absent from [new materialist] considerations are consciousness and cognition, presumably because of the concern that if they were introduced, it would be all too easy to slip into received ideas and lose the radical edge that the focus on materiality provides. This leads to a performative contradiction: only beings with higher consciousness can read and understand these arguments, yet few if any new materialists acknowledge the functions that cognition enables for living and nonliving entities. Reading them, one looks in vain for recognition of cognitive processes, although they must necessarily have been involved for these discourses to exist at all’ (pp. 65-66).

GROSZ on Consciousness

‘Consciousness is not a separate organ added to life at a certain stage of its growing complexity; rather, it is the condition for the dynamic unity of an organism, an organism’s capacity to survive, to act in its environment, in short, to enjoy itself, to experience autoaffection, immediate self-enjoyment’

(Grosz, 2017 p. 216 The Incorporeal: Ontology, Ethics, and the Limits of Materialism)

See also Clough, Ruyer

Two Polarities of the New Materialist Sleepwalker

1. Somnolent

Fuller's 'somnolent version of the Cretan Paradox.'

'... In order to think about [sleep] we must be awake or to know something... Sleep, unlike any other part of culture has no capacity for reflexivity within its own conditions. In sleeping one simply sleeps, one does not know, anything..

Sleep is therefore 'ungraspable, unwritable [and] only perceivable at its edges or its outside.'

(Fuller in *How to Sleep: The Art, Biology and Culture of Unconsciousness*, 2018 pp. 1-2)

1. Somnolent

As Clough similarly explains by referring to Jean-Luc Nancy's *The Fall of Sleep*:

We are told that we do not fall asleep, but that sleep falls upon us. Or, it is not "I" that falls into sleep, not an "I" that can be distinguished itself from anything else, "from anything more than its own indistinctness." "I" fall asleep – that is to say, 'I' fall...." "In my own eyes, which no longer look at anything, which are turned toward themselves and toward the black spot inside them,..." I am "isolated from all manifestations, from all phenomenality, the sleeping thing..."

Clough (2018) *The User Unconscious*

Two Polarities of the New Materialist Sleepwalker

2. Ambulant

The act of walking can indeed be performed when sleep falls on the subject. Sleepwalking is, like this, an impulsive act, which can be achieved when the act itself is *out of mind*, since its mechanical and habit bound processes are, for the most part, nonconscious rather than conscious.

2. Ambulant

Collective experience wherein bodily interactions become entrained...

Rhythm of footsteps, bobbing heads...

As Clayton et al argue, in entrainment theory “any bodily implementation of interacting processes is real, no matter whether it is consciously experienced or not.”

Clayton, Martin; Sager, Rebecca and Will, Udo (2005). In time with the music: the concept of entrainment and its significance for ethnomusicology. European Meetings in Ethnomusicology, 11, pp. 3–142. p. 70.
